BATTERY VENT TUBE

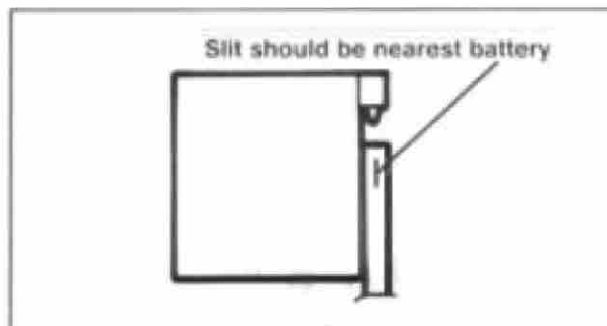

General

This vent tube is designed for installation on all Genuine Harley-Davidson batteries.

Installation

WARNING

- Batteries contain sulfuric acid which is highly corrosive and can cause chemical burns. Avoid contact with skin, eyes or clothing. Always wear approved eye protection when working around batteries.
- Make sure slit end of battery vent tube is connected to battery vent. This will provide an emergency vent if tube becomes clogged or kinked. Failure to properly vent battery could result in battery explosion.
- Always make sure battery vent tube is routed away from exhaust pipes or mufflers. Sparks near end of hose could cause battery to explode.

Vent Tube Connection to Battery

1. Vent tube is supplied in one length for all battery applications. If supplied tube is longer than original equipment tube, trim off excess length from one end of new tube.
2. See illustration. When installing new tube on battery, connect untrimmed end (with emergency vent slits) to exhaust nipple on battery.
